

ADVANTAGES

- Include pre-drilled holes for riveting or bolt-together installation of built-up banks.
- May be assembled in banks up to six units high and any number of units wide (flat stock vertical stiffener bars are required for banks four to six units high alternating every other filter frame).
- May be combined with additional banks of frames for additional gaseous or particulate filtration.
- Include a unique bayonet mount that assures a tight filter-to-frame seal.
- Manufactured from 14-gauge welded aluminized steel (also available in stainless steel).
- Include mounting holes and flow paths for lock-mounting of CamCarb adsorbent cylinders (order separately, see Camfil product literature 2112).

Application	Large system retrofits, custom air handling systems and other HVAC systems handling large volumes of air.
Frame	Galvanized steel
Comment	Frame thickness .06" (1.5 mm) and .08" (2mm)
